## The Splinter Group at the Berkeley City Club

We would like to invite you to our up-coming Splinter Group meeting of contractors, architects, designers, and leaders of the construction industry. The topic of this event is “Blueprints for Building Green,” focused on sustainable building, design and business practices. This is the fifth annual sustainable building conference that Canyon Construction has hosted for the Splinter Group.

Over the past several decades many of us have promoted a variety of green building practices and have seen a rapid increase in consumer and industry interest in sustainable building techniques.

As an industry we have the opportunity and responsibility to affect change . The Splinter Group is imbued with a spirit of dedication and perseverance to raise the standards and attitudes throughout our industry. We believe our experience in many fields of ecologically minded construction methods must be shared.
